

Temporary Fence Spring Tune-Up

After a winter of snow, passing plows, ice and gusty winds, spring is the perfect time to inspect your fence to ensure it is secure and safe for vehicles and passersby.

- SECURELY INSTALLED** - Inspect the full length of your fence to ensure ground stands are firmly set on the ground and u-clamps are still tightly in place.
- FENCE LINE IS CLEAR** - Accumulations of snow and ice and street sanding through the winter can result in a fence line covered in debris in spring. Ensure your fence line is clear of sand and trash which can present a tripping hazard to pedestrians.
- SECURED FOR SCREENING** - While polyethylene fence screening offers added site privacy, it can increase the likelihood of the fence toppling in high winds. If you have screening on your fence, it is extra-imperative to make sure your fence is standing securely.
- INSPECTED REGULARLY** - Regardless of the type of fence you use and what seasons you are using it in, it is important to inspect your fence regularly to ensure it is stable and safe.
